MAJOR CRIMES DIVISION // INVESTIGATIVE REPORT

DATE REPORTED:	July 3, 2026	PRIMARY SUSPECT:	PAREDES,
INCIDENT TYPE:	Corporate Espionage		Monica
INVESTIGATOR:	Det. R. Vance, #7402	STATUS:	Detained /
			Under Review
		SECURITY LEVEL:	RESTRICTED
			ACCESS

[01] INCIDENT OVERVIEW

On the morning of July 2, 2026, automated intrusion detection perimeter arrays at NexaCore Solutions flagged an anomalous background data transfer originating from core terminal 4B-North. Investigation indicates that over 14.2 gigabytes of proprietary algorithm blueprints and structural metadata were compressed and uploaded to an external, encrypted offshore cloud server repository. Digital forensics traced the active credential handshake session directly to the assigned account of Monica Paredes.

[02] SUSPECT PROFILE

FULL NAME:	Monica Elena Paredes
D.O.B.:	April 14, 1993
LAST KNOWN ADDRESS:	4421 Elmwood Ave, Detroit, MI
CURRENT POSITION:	Senior Systems Architect (Suspended)
CLEARANCE LEVEL:	Level 4 (Administrative Override privileges)

[03] EVIDENCE INVENTORY

- Item #1: Physical Access Logs
Electronic keycard signatures show the suspect entering server containment matrix room 3G at 22:14:05 on July 1, 2026, outside her regular designated operational shift hours.
- Item #2: Hardware Asset
One (1) military-grade encrypted high-capacity USB flash drive recovered from the false bottom of the suspect's desk during a preliminary forensic sweep.

- **Item #3: Intercepted Network Communications**

Encrypted internal chat logs recovered via server relays between Suspect and an unidentified external proxy negotiating a monetary valuation for "core platform architectures."

[04] WITNESS STATEMENT MATRIX

Witness: Marcus Vance (Lead Network Engineer)

"Monica had been acting increasingly defensive about the new infrastructure optimization changes all week. She asked highly specific questions about the perimeter firewall scheduled maintenance window and automated logging delays. I didn't think much of it until the alerts tripped the next morning."

[05] CURRENT STATUS & INTERROGATION

The suspect was detained without incident for questioning on July 6, 2026. During formal interrogation, she strongly maintained her innocence, asserting that her primary administrative credentials were hijacked via a sophisticated multi-stage spear-phishing campaign targeting home network environments. The investigation remains open pending decryption analysis of recovered hardware assets.
